

Proposed Solution

Project: Import Data using Transform Maps (Spreadsheet)

Platform: ServiceNow

Parameter	Description
Problem statement	Bulk spreadsheet data is slow and risky to enter manually into ServiceNow
Idea / solution	Load data into an Import Set table and transform it into the target table using a Transform Map
Novelty	Reusable mapping with Coalesce; the same setup handles any future file with the same layout
Social impact	Saves staff time, reduces errors, improves data quality for employees
Business model	Reduces operational cost; can be offered as a standard onboarding utility
Scalability	Supports larger files, scheduled imports and other sources (REST, JDBC)
