

Brainstorm & Idea Prioritization

Project: Import Data using Transform Maps (Spreadsheet)

Platform: ServiceNow

Step 1: Team Gathering and Problem Selection

Team members discussed the challenges of handling bulk data in ServiceNow and selected "importing spreadsheet data reliably" as the focus problem.

Step 2: Brainstorm and Write Down Ideas

No.	Idea
1	Enter every record manually through the form
2	Use the Excel import option on a list
3	Import Set with a Transform Map (staging + mapping)
4	Write a custom script or REST integration
5	Scheduled import from a shared file location

Step 3: Group Ideas

Group	Ideas
Manual approaches	1, 2
Native ServiceNow automation	3, 5
Custom development	4

Step 4: Idea Prioritization

Idea	Impact (1-5)	Effort (1-5, low is better)	Decision
Manual entry	1	5	Rejected
List Excel import	2	2	Limited control
Import Set + Transform Map	5	2	Selected
Custom script / REST	4	5	Too complex
Scheduled import	4	3	Future scope

Final idea: Use Import Sets and Transform Maps to load spreadsheet data into a staging table and map it to the target table with duplicate control.
