

Solution Architecture

Project: Import Data using Transform Maps (Spreadsheet)

Platform: ServiceNow

3.3 Solution Architecture

Components

Component	Role
Data Source	Points to the uploaded file, defines format and header row
Import Set Table	Temporary staging table holding raw rows
Transform Map	Defines source table, target table and mapping rules
Field Maps	One rule per source-to-target field pair
Coalesce	Marks the unique field used to find existing records
Transform History	Shows the result of each run

3.4 Field Mapping Design

Source Column	Target Field	Rule
Employee ID	employee_number	Coalesce (unique key)
First Name	first_name	Direct
Last Name	last_name	Direct
Email	email	Direct (lower-case if scripted)
Department	department	Reference lookup
Title	title	Direct

3.5 User Flow
