

Solution Requirements

Project: Import Data using Transform Maps (Spreadsheet)

Platform: ServiceNow

Functional Requirements

ID	Requirement	Description
FR-1	File upload	Attach an .xlsx or .csv file to a Data Source
FR-2	Load data	Load rows into an Import Set staging table
FR-3	Field mapping	Map each source column to a target field
FR-4	Duplicate control	Use a Coalesce field to update instead of duplicate
FR-5	Transform	Run the Transform Map to insert or update target records
FR-6	Review	View results in Transform History and Import Log

Non-Functional Requirements

ID	Type	Requirement
NFR-1	Usability	Steps are simple enough for an administrator with basic training
NFR-2	Reliability	Re-running the same file must not create duplicates
NFR-3	Performance	Hundreds of rows import within minutes
NFR-4	Security	Only users with admin / import roles can run imports
NFR-5	Auditability	Every import is recorded with counts of inserted, updated, ignored and errored rows
NFR-6	Reusability	The same Transform Map can be reused for future files
