

# Talking Points and Q and A

**Project:** Import Data using Transform Maps (Spreadsheet)

**Platform:** ServiceNow

## 8.2 Key Talking Points

- Why manual entry fails for bulk data.
- The role of the Import Set as a staging area.
- How the Transform Map separates loading from mapping.
- How Coalesce prevents duplicates.
- How logs help with troubleshooting.

## 8.3 Possible Questions and Answers

| Question                 | Answer                                                                             |
|--------------------------|------------------------------------------------------------------------------------|
| What is an Import Set?   | A staging table that holds raw imported data before it is transformed.             |
| What is a Transform Map? | A set of rules that maps source fields to target table fields.                     |
| What is Coalesce?        | A field used to match existing records so they are updated rather than duplicated. |
| Where do I see errors?   | In Transform History and the Import Log.                                           |
